Introduction to Building Codes

- Codes are minimum requirements to safeguard the public health, safety and welfare of the public and occupants or users of spaces or buildings.

ICC Code Development Cycle

- New code published every 3 years
- 12 month cycle
- Codes divided into 3 groups
  1. IBC, IPC, IMC, IFGC, IPSDC
  2. IRC, IFC, IEBC, IECC, IPMC, ISPSC, IWUIC, IZC, ICCPC, Admin.
  3. IgCC
IRC – International Residential Code

- Regulates of 1- and 2-family dwellings and townhouse structures
- Combines all regulations for building, energy, mechanical, fuel gas, plumbing and electrical into one document

Dwellings and Townhouses

- Maximum 3 stories above grade plane
- Allows a full basement in addition to 3 stories
- Habitable attic is not considered a story

Dwellings

- Separate means of egress to the outdoors for each dwelling unit
  - 1 exterior exit door
  - Egress travel distance is not regulated
- No limit on size of dwellings
- 2-family dwellings require fire-resistant separations

Townhouses

- Minimum of 3 townhouses
- No maximum on the number of townhouses
- Fire-resistant separations between townhouses
- Townhouses open on front and back

Units are not open on 2 sides; cannot be constructed under the IRC
Accessory Buildings

- The IRC regulates accessory buildings
  - Use incidental and accessory to dwelling
  - On same lot as dwelling
  - Unlimited area
  - ≤ 3 stories AGP

Existing Buildings

- Existing buildings permitted to continue without change
  - Maintained per code under which they were constructed
- The IRC regulates additions, alterations and repairs to an existing building
- Appendix J offers compliance alternatives for construction on existing buildings
  - Work categorized as repair, renovation, alteration or reconstruction

Adoption of the IRC

- Adopting by local ordinance includes:
  - Edition and title of the IRC
  - Purpose and scope
  - Effective date for ordinance
  - Insertion of local information and criteria into code text:
    - Name of the jurisdiction
    - Design criteria
    - Building sewer depths

Appendices

- Developed in the same manner as the main body of code
- May provide some guidelines or examples of recommended practices
- May assist in the determination of alternative materials or methods
- Have no legal status until specifically recognized in the adopted ordinance or legislation
Building Official Authority and Duties

- Building Official is authorized and directed to:
  - Enforce provisions of code
  - Make interpretations
  - Adopt policies and procedures
  - Approve modifications and alternatives
- Limits on authority:
  - Not authorized to waive code requirements
  - Not authorized to require more than the code

Within intent and purpose of code

Alternative Methods and Materials

- The IRC does not exclude any material or method
- Alternatives subject to approval by the Building Official
- The Building Official has an obligation to approve alternatives that meet the intent of the IRC
  - Reports issued by the ICC Evaluation Service (ICC-ES) are valuable resources in verifying performance equal to the code requirements
  - www.icc-es.org
- Reason for disapproval in writing

Permits

- Construction requires a permit before work begins
- Exempt work:
  - 1-story tool and storage sheds, playhouses, and similar uses ≤ 200 ft²
  - Decks
    - ≤ 200 ft²
    - ≤ 30 in. above grade
    - Not attached to a dwelling and do not serve the required exit door
  - Fences ≤7 ft. in height

Fees

- The jurisdiction may charge permit fees to offset the costs of providing associated services to the public
  - Administration costs
  - Plan review costs
  - Inspection costs
- The Building Official develops equitable and consistent procedures for establishing fees
Required Inspections

- Foundation
- Floodplain
- Plumbing, mechanical, gas and electrical systems
- Frame and masonry
- Fire-resistance-rated construction
- Other inspections as deemed necessary
- Final inspection

Board of Appeals

- The public has the right of due process to appeal an order, decision or determination of the building official.
- Basis for appeal:
  - The code has been interpreted incorrectly
  - The code does not apply
  - An equivalent alternative was not accepted
- The Board of Appeals has no authority to waive code requirements

Fire Separation Distance

- Measured perpendicular to the exterior wall
- Measured between the building and:
  - Lot lines
  - Centerline of a street or alley
Site Preparation

- Two basic provisions:
  - Soil characteristics as they relate to the support and stability of foundations
  - Grading to provide surface drainage away from foundations

General Requirements

- Exterior footings
  - Minimum of 12" below the undisturbed ground level
  - Protected against frost

- All footings must bear on:
  - Natural soil; or
  - Compacted engineered fill

Presumptive Load-bearing Values & Properties of Soils

</tbody>
</table>

Fill

- Engineered fill is required for:
  - Over-excavation to remove unsuitable soils
  - Additional material to raise the elevation of the footings above the existing undisturbed soil

- Engineered fill must be:
  - Designed by a registered design professional
  - Installed as specified in design requirements
  - Tested as specified in design requirements
Storm Drainage

- Final grade
  - Minimum fall 6" within 10' of foundation
  - Exception for local site conditions
    - Water can be directed to swales or drains
  - Concrete surfaces within 10' of the foundation need 2% slope

---

Table R301.2(1)

</tbody>
</table>

Table R301.2(1) (Continued)
Climatic and Geographic Design Criteria

- Winter Design Temp: 2° F
- Flood Hazards: Date NFIP, Etc.
- Air Freezing Index: 1197
- Mean Annual Temp: 51° F

Prescriptive and Performance

- Prescriptive requirements
  - A specific set of rules to follow

- Performance requirements
  - Expectation that the system will function in a certain way
  - For structural requirements, performance is achieved through engineering

Prescriptive and Performance

- Conventional construction
  - Engineered design can be used for structural elements that:
    - Exceed the limits in the code; or
    - Are not included in the code

- Alternative to wood framing provisions
  - Wood Frame Construction Manual published by the American Wood Council
    - WFCM addresses wind speeds up to 150 mph
    - IRC wind speeds are less than 110 mph

For example, the sizing of wide flange steel beams
Live Loads

IRC Table R301.5
Minimum Uniformly Distributed Live Loads

<table>
<thead>
<tr>
<th>USE</th>
<th>LIVE LOAD (psf)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Uninhabitable attics without storage</td>
<td>10</td>
</tr>
<tr>
<td>Uninhabitable attics with limited storage</td>
<td>20</td>
</tr>
<tr>
<td>Habitable attics and attics served with fixed stairs</td>
<td>30</td>
</tr>
<tr>
<td>Balconies (exterior) and decks</td>
<td>40</td>
</tr>
<tr>
<td>Fire escapes</td>
<td>40</td>
</tr>
<tr>
<td>Rooms other than sleeping rooms</td>
<td>40</td>
</tr>
<tr>
<td>Sleeping rooms</td>
<td>30</td>
</tr>
</tbody>
</table>

Live Loads (Continued)

Minimum Uniformly Distributed Live Loads

<table>
<thead>
<tr>
<th>USE</th>
<th>LIVE LOAD (psf)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Guardrails and handrails</td>
<td>200</td>
</tr>
<tr>
<td>Guardrail in-fill components</td>
<td>50</td>
</tr>
<tr>
<td>Passenger vehicle garages</td>
<td>50</td>
</tr>
<tr>
<td>Stairs</td>
<td>40</td>
</tr>
</tbody>
</table>

Dead Loads

- Average dead loads are included in the prescriptive tables for:
  - Footings
  - Floors
  - Walls
  - Roofs

For example, spread footing sizes for conventional frame construction assume average weights for the construction materials being supported.

Deflection

- Allowable deflection in structural framing members:
  - Studs
  - Joists
  - Beams
  - Rafters
  - Table R301.7
    - L = span length
    - H = span height

<table>
<thead>
<tr>
<th>Structural Member</th>
<th>Allowable Deflection</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rafters having slopes greater than 3:12 with no finished ceiling attached to rafters</td>
<td>L/180</td>
</tr>
<tr>
<td>Interior walls and partitions</td>
<td>H/180</td>
</tr>
<tr>
<td>Floors/ceilings with plaster or stucco finish</td>
<td>L/360</td>
</tr>
<tr>
<td>All other structural members</td>
<td>L/240</td>
</tr>
<tr>
<td>Exterior walls—wind loads with plaster or stucco finish</td>
<td>H/360</td>
</tr>
<tr>
<td>Exterior walls with other brittle finishes</td>
<td>H/240</td>
</tr>
<tr>
<td>Exterior walls with flexible finishes</td>
<td>H/120</td>
</tr>
<tr>
<td>Lintels supporting masonry veneer walls</td>
<td>L/800</td>
</tr>
</tbody>
</table>
Example 4-1 Floor Joist Deflection

- Floor joist span is 14’
- Allowable deflection from Table R301.7 is L/360

L = 14’ x 12” = 168”
168 ÷ 360 = 0.47

Allowable deflection is 0.47”

Note: a 14’ span rafter with 4:12 slope and no ceiling attached has an allowable deflection of L/180, which is twice the deflection allowed for floor joists.

Wind Loads

- Wind forces acting on buildings
  - IRC conventional framing limits wind speed to 140 mph $V_{ult}$ (130 in hurricane prone areas)
  - AWC – Wood Framing Construction Manual (WFCM)
  - ICC 600 – Standard for Residential Construction in High-Wind Regions
  - ICC – International Building Code
  - ASCE 7 – Minimum Design Loads for Buildings and Other Structures

Wind Exposure Category

- Exposure B
  - Some wind protection with trees and buildings
  - Default
- Exposure C
  - Open terrain with scattered obstructions
- Exposure D
  - Flat, unobstructed areas exposed to open water, smooth mud flats, salt flats and unbroken ice for ≥ 5,000 ft

Hurricane-prone regions

- Hurricane-prone regions. Areas vulnerable to hurricanes, defined as the U.S. Atlantic Ocean and Gulf of Mexico coasts where the ultimate design wind speed, $V_{ult}$, is greater than 115 miles per hour, and Hawaii, Puerto Rico, Guam, Virgin Islands and America Samoa.
- Windborne debris region. Areas within hurricane-prone regions located in accordance with one of the following:
  - 1. Within 1 mile of the coastal mean high water line where the ultimate design wind speed, $V_{ult}$, is 130 mph or greater.
  - 2. In areas where the ultimate design wind speed, $V_{ult}$, is 140 mph or greater, or Hawaii.
Snow Loads

- Snow loads must be considered where applicable
- IRC and WFCM conventional framing tables are limited to snow load <70 psf

Earthquakes

- The IRC assigns a Seismic Design Category to building sites relative to the anticipated intensity and frequency of earthquakes
- Prescriptive provisions of the IRC are adequate for SDC A and B

<table>
<thead>
<tr>
<th>Seismic Design Category</th>
<th>1- and 2-Family Dwellings</th>
<th>Townhouses</th>
</tr>
</thead>
<tbody>
<tr>
<td>A &amp; B</td>
<td>No seismic requirements</td>
<td>No seismic requirements</td>
</tr>
<tr>
<td>C</td>
<td>No seismic requirements</td>
<td>Seismic Requirements Apply</td>
</tr>
<tr>
<td>D₀, D₁, D₂</td>
<td>Seismic Requirements Apply</td>
<td></td>
</tr>
<tr>
<td>E</td>
<td>Engineered Design Required</td>
<td></td>
</tr>
</tbody>
</table>

Earthquakes

- Regularly shaped buildings
  - Uniform distribution of forces
  - More predictable response characteristics
- Irregularly shaped buildings
  - Force concentrations
  - Generally less effective in resisting earthquake load effects

Foundation Materials

- Concrete
  - Removable forms
  - Stay-in-place insulating concrete forms (ICF)
- Precast concrete
- Masonry
- Wood
- Engineered or alternative designs
Footings

- Footings must bear on undisturbed ground
- Footings must extend below the frost depth
- Exterior footings 12” below undisturbed ground level
- Detrimental materials removed prior to placing concrete

Size of Concrete Footings

<table>
<thead>
<tr>
<th>Snow load</th>

Example 5-1

Footing Size

- Determine minimum width (W), projection (P) and thickness (T) of a continuous spread footing
- Given:
  - 2-story dwelling with basement
  - 1500 psf assumed soil bearing capacity
  - 30 psf snow load
  - Conventional construction:
    a) Light-frame construction with siding
    b) Light-frame construction with brick veneer

Projection “P” ≥ 2 in. and ≤ T
Thickness “T” ≥ 6 in.
Width “W” per table
Example 5-2
Isolated Footing Size

- **Given:**
  - Column supports tributary floor area of 120 ft² at 50 psf
  - 1,500 psf assumed soil-bearing capacity
- **Determine minimum footing size**

Foundation Anchorage

- **Anchor bolts**
  - ¼-inch diameter
  - 7-inch embedment
  - Middle 1/3 of plate

Example 5-2
Isolated Footing Size

- **Soil load-bearing capacity**
  - 1500 psf
- **Tributary column load**
  - 120 ft² x 50 lbs. = 6,000 lbs.
  - 6,000 lbs. + 1,500 psf = 4 ft²
- **Thickness (T) Min. 6”**
- **Projection (P) cannot exceed footing thickness**

Foundation Anchorage

- Wood sill plate anchorage to foundation for
  - Dwellings and townhouses in SDC “A” and “B”
  - Dwellings in SDC “C”

  - Standard washer and nut on each bolt
  - Max 12 in. Min. 7 bolt dia.
  - Max 6 ft.

  - Note: Offsets ≤ 24” require only one anchor bolt in center third of plate
Foundation Anchorage

- Wood sill plate anchorage
  - Seismic
  - Dwellings and townhouses in SDC D₀, D₁, and D₂
  - Townhouses in SDC C

3” x 3” plate washers
approximately ¼” thick
Bolt spacing ≤ 4’
for anchorage of
3-story buildings

Concrete Foundation Walls

- Foundation walls must be constructed to resist lateral loads
- Thickness and vertical reinforcement determined by:
  - Soil type
  - Height of foundation
  - Height of unbalanced backfill
    - Difference in height between the exterior finish ground level and the top of the interior basement floor

Concrete Foundation Walls

- Horizontal reinforcing required for basement walls
  - Table R404.1.2(1)

<table>
<thead>
<tr>
<th>Maximum Unsupported Height of Basement Wall</th>
<th>Location of Horizontal Reinforcement</th>
</tr>
</thead>
<tbody>
<tr>
<td>≤8 feet</td>
<td>One No. 4 bar within 12” of the top of the wall and one No. 4 bar near mid-height of the wall story</td>
</tr>
<tr>
<td>&gt;8 feet</td>
<td>One No. 4 bar within 12” of the top of the wall and one No. 4 bar near third points the wall story</td>
</tr>
</tbody>
</table>

- Vertical reinforcing required
  - Tables R404.1.2(2) through R404.1.2(9)

Horizontal Reinforcing in Concrete Basement Wall

- Table R404.1.2(1)
  - 3 horizontal No. 4 bars
  - One bar within 12” of top
  - Other bars at third points
  - Bars located in center of wall
Vertical Reinforcing in Concrete Basement Wall

- Soil class = CL inorganic sandy clay
- 10" nominal thickness
- Wall height = 9'
- Unbalanced backfill height = 8'
- Table R404.1.2(8) Vertical Reinforcement
  - No. 6 bars at 39 inches on center

<table>
<thead>
<tr>
<th>Wall Hgt.</th>

</tr>
<tr>
<td>12&quot;</td>
<td>8 @ 24 6 @ 29</td>
<td>6 @ 39 6 @ 29 6 @ 39 4 @ 48</td>
</tr>
</tbody>
</table>

Height Above Finished Grade

- Concrete and masonry foundation walls must extend above the finished grade adjacent to the foundation
  - Minimum of 4" with masonry veneer
  - Minimum of 6" elsewhere

Moisture Protection

- Drainage by perforated pipe or other approved drain system
  - Installed at or below the level of the basement or crawl space floor
  - Exception for areas with well-drained soils
  - Dampproofing materials applied to the exterior of the foundation
  - Waterproofing in areas with a high water table or other known severe soil-water conditions
  - Flexible sealants or other impervious material

Underfloor Space

- Ventilation of crawl space required
  - Circulate air
  - Dissipate condensation
  - Method of ventilation
    - Foundation openings
    - Mechanical exhaust ventilation
    - Connection to the conditioned air supply of the dwelling
  - Access to underfloor spaces
    - 18" x 24" through floor
    - 18" x 24" through perimeter wall
Framing

- Light-frame construction
  - Wood or cold-formed steel
- Grade mark on wood products
  - Wood structural panels
  - Load-bearing dimension lumber

Engineered Wood Products

- Plate-connected open web trusses
- I-joists
- Glued-laminated lumber
- Laminated veneer lumber (LVL)
- Other structural composite lumber (SCL)

Wood Trusses

- Design submitted to building official for approval
- Include:
  - Design loads
  - Slope or depth, span and spacing
  - Required bearing widths
  - Lumber size, species and grade
  - Connection requirements
  - Required permanent bracing location
  - Other information

Wood Treatment

- Wood in locations subject to decay requires:
  - Wood treated with preservatives; or
  - Naturally durable wood
    - Redwood
    - Cedar
    - Black locust
    - Black walnut

Tag on preservative treated wood
Protection Against Decay

Naturally decayed in preservative treated wood required for balus, joist, and decking.

Clearance above grade

Boring and Notching
Floor and Ceiling Joists

- Boring holes and notching of solid sawn beams, floor joists and ceiling joists

Boring and Notching
Bearing Walls

Boring and Notching
Nonbearing Walls

Hole size in 2' x 4' stud
Stud depth = 3½"
Largest hole <60%
60% x 3½ = 2 1/8"
5/8" + 2 1/8" + 5/8" = 3 1/8"
**Draftstopping**

- Divide concealed floor assembly spaces into areas of <1000 ft²

- Materials:
  - 1/2” gypsum board
  - 3/8” wood structural panels
  - Other approved materials

**Fireblocking**

- Designed to stop the spread of fire in concealed spaces of wood frame construction

**Wood Floor Framing**

- Prescriptive tables for:
  - Beams and girders
    - No. 2 grade Douglas fir-larch, hem-fir, southern pine and spruce-pine-fir
    - Various support conditions
  - Floor joists
    - Specific grade and species of lumber
    - Live load 30 or 40 psf
    - Dead load 10 or 20 psf
Example 6-1

Beam Size and Bearing Support

- Determine the minimum size and bearing support requirements for an interior beam supporting 2 floors
- #2 hem-fir lumber
- Building width = 28'
- Beam span = 6'

<table>

</tbody>
</table>

Description: 24" O.C. at top and bottom and staggered. Three nails at ends and at each splice.

Deck Attachment

- Deck ledger connection to:
  - 2" band joist; or
  - 1 x 9½ Douglas Fir LVL rim board

- Fasteners
  - ≥½" diameter lag screws or bolts with washers
  - Hot-dipped galvanized or stainless steel
  - Lag screws full-depth through rim joint
  - Fasteners staggered along length of ledger
Deck Joists and Beams

- Prescriptive methods for joists and beams in deck construction.
  - Spans & bearing requirements

Wall Framing

- Size and spacing of studs is related to:
  - Number of floors being supported
  - With or without the additional load of the roof-ceiling assembly

Example 6-3 Stud Size and Spacing

- Determine the minimum size, maximum height and maximum spacing of standard studs in an exterior bearing wall
- Given:
  - 3 stories of wood framing (walk-out basement plus 2 stories)
  - Standard- or stud-grade lumber

### Table R602.3(5)

<table>

Stud height in bearing walls is generally limited to 10'.
Example 6-4
Header Size in Exterior Walls

- Given:
  - Ground snow load = 30 psf
  - Clear span roof truss
  - Center bearing floor framing
  - Building width = 28'
  - Header span = 7'
  - #2 Douglas fir-larch

Wall Bracing

- Wall bracing provides resistance to racking from lateral loads, primarily wind and seismic forces.
- Amount and location of bracing is determined by several factors:
  - Number of stories
  - Seismic design category
  - Design wind speed
  - Method of bracing

Method PFH
Braced Wall Panels

Portal Frame with Hold-Downs

- Minimum hold-down capacity 3500 lbs
- Double sill plate
- 5/8-inch anchor bolt
Ceiling Joists

- Ceiling joists
  - Support ceiling materials
  - Serve as rafter ties to resist the outward thrust of the rafters at the top of the wall
  - Require adequate connection to the rafter and top of wall
- Ceiling joist spans for:
  - Attics without storage
  - Attics with limited storage
    - Attics with fixed stair access require joists sized as floor joists

Rafters

- Rafter spans based on:
  - Snow load of the geographic area;
  - Roof live load of 20 psf where snow load <30 psf;
  - Whether ceiling material is attached to the bottom of the rafter
- Connection to ceiling joists
  - Rafters are connected to the ceiling joists at the top plate; or
  - 2 x 4 rafter ties are required to resist the outward thrust forces of the rafters on the wall

Example 6-6 Rafter Size and Spacing

- Given:
  - #2 Spruce-pine-fir lumber
  - Span = 15'
  - Ground snow load = 30 psf
  - Dead load = 10 psf
  - Ceiling not attached to rafters

Example 6-6 Rafter Size and Spacing

Roof Uplift Connections

- Table provides uplift values based on:
  - Building width
  - Wind speed
  - Exposure category
  - Roof pitch
- For ≤200 lbs. uplift, toe-nail connection is OK
- For >200 lbs. uplift, a connector is required
Example

Roof Uplift Connection

- Determine uplift forces
- Given:
  - Wind speed = 115 mph
  - Wind exposure B
  - Trusses 24 in. o.c.
  - Building width = 36 ft
  - Roof slope = 5:12

</table>

Attic Ventilation and Access

- Total net free ventilating area must be 1/150 of attic area
  - Reduced to 1/300 when 40% to 50% of ventilating area in upper portion of space
  - Unvented attics may be permitted with certain conditions

- Access to attics required when:
  - Attic area >30 ft², and
  - Attic height >30"

- Access
  - Minimum 22" x 30"
  - 30" headroom above the opening
  - Located in a hallway or other readily accessible location

Interior Finishes

- Minimum installation requirements for:
  - Gypsum board (drywall)
  - Plaster
  - Ceramic tile
  - Wood paneling

- Inspection is not required except when part of a fire-resistance-rated assembly
**Exterior Wall Covering**
- 3 components of a weather-resistant exterior wall assembly:
  - Water-resistive barrier required over sheathing of all exterior walls, except for detached accessory buildings
  - Flashing
  - Siding or veneer
- 1 layer of #15 asphalt saturated felt, or Other approved water-resistant material

**Masonry and Stone Veneer**
- SDC A, B or C
  - < 3 stories
  - < 30 feet above noncombustible foundations
  - Additional 8 feet for gable end walls
  - < 5 inches thick
  - Weight < 50 psf weight
- SDC D₀, D₁, or D₂
  - Reduced height, weight and thickness limitations

**Example 7-1 Size of a Steel Lintel**
- Determine the minimum size of a steel lintel supporting masonry veneer with 1 story above

**Roof Covering**
- Weather protection system:
  - Underlayment
  - Ice barriers
  - Flashing
  - Roofing material
Underlaymen for Asphalt Shingles

- Slope >2:12
  - 1 layer underlayment
  - 2" horizontal lap
  - 19" horizontal lap
  - 2 layers underlayment
  - No. 15 asphalt felt
  - Offset vertical laps by 6'

- Slope >2:12 and <4:12
  - 1 layer underlayment
  - 2" horizontal lap
  - 19" horizontal lap
  - 2 layers underlayment
  - No. 15 asphalt felt
  - Offset vertical laps by 6'

Ice Barriers

- Ice barrier is required in areas with a history of water damage to structures from ice dams at roof eaves.

Ceiling Height

- Generally 7 ft. 0 in.
- 6 ft. 8 in.:
  - Bathrooms
  - Toilet rooms
  - Laundry rooms
  - Basements w/o habitable space or hallways
- 6 ft. 4 in. basements:
  - Beams
  - Girders
  - Ducts
  - Other obstructions

Part V
Health and Safety
Means of Egress

- “Means of egress” describes the path of travel from any location in the dwelling to the exterior
  - Stairways
  - Ramps
  - Hallways
  - Doors
    - One 3 - 0 x 6 - 8 side-swinging egress door to exterior
    - No size or type requirements for other doors
    - No limits on travel distance

Landings at Exterior Doors

- Landing or floor on each side of exterior door
  - At least as wide as the door
  - ≥ 36 in. in the direction of travel
  - Max. landing slope = ¼ / 12
- No elevation requirements in Section R311.3
- Exception for balconies
Landings at Exterior Doors
- Other than required egress door
- Landing on either side:
  - ≤ 7¾ in. below top of the threshold
- Door swings either direction

Stairs at Exterior Doors
- Door other than required egress door
- Exception
  - Stairs allowed on exterior side
    - Door cannot swing out over stairs
    - Stairs can have a maximum of 2 risers

Stair treads and risers
- Riser ≤ 7¾ in.
- Tread ≥ 10 in.
- Variance ≤ ¾ in.
- Nosing projection ¾ - 1¼ in.

Stair treads and risers
- Treads > 30 in. above floor or grade
  - Solid risers, or
  - 4-in. diameter sphere cannot pass through
Stairway Width

- Minimum clear width of 36"
  - Required above the handrail; and
  - Below the required headroom height
- ≤ 4½” handrail projection either side

Stairway Headroom

- Minimum headroom
  - 6 ft. 8 in.
  - Above plane of tread nosings

Winder Stairs

- Nonparallel edges
- Tread depth of 6” at the narrow end
- Tread depth of 10” measured at walk line

Landings

- Required at top and bottom of stairs
- Width of stairway
  - Minimum 36" in direction of travel
  - Maximum 147” vertically between landings
- Exception allows a door at the top of an interior flight of stairs, provided the door does not swing over the step
**Handrail**

- Max. 4½-inch projection from wall
- Min. 1 ½-inch clearance to wall
- Graspable shape

**Guards**

- A walking surface >30 inches above any point within 36 inches horizontally
- Min. guard height 36 in.
  - 34 in. at stairs

**Handrail continuity**

**Guards**

- Openings shall not allow a 4-in. sphere to pass through
  - 4 ¾ in. along stairs
- Top rail to resist a single concentrated load of 200 lbs. applied in any direction
- Infill components to resist 50-lb. horizontal load applied to an area of 1 ft²
Windowsill Height

- Window openings >72” above grade must have a sill height of >24”
- Alternatives to 24” sill height
  - Window opening control device
  - Window fall prevention device
  - Fixed glazing

Emergency Escape and Rescue Openings

- Basements
- Habitable attics
- Sleeping rooms
  - Exceptions:
    - Storm shelters
    - Basements ≤ 200 sq. ft. used only to house mechanical equipment

Emergency Escape and Rescue Openings

- Minimum area 5.0 ft² for grade floor or below grade openings
- Minimum width = 20”
- Minimum height = 24”
- Minimum area = 5.7 ft²

Safety Glazing – Adjacent Doors
Safety Glazing – Windows

- Exposed area of an individual pane > 9 sq. ft.
- Bottom edge of glazing < 18 in. above floor
- Top edge of glazing > 36 in. above floor
- Exception:
  - Horizontal rail installed 34 to 38 in. above walking surface

Safety Glazing – Wet Surfaces

Safety Glazing – Adjacent Stairs

Safety Glazing – Adjacent Bottom Landing
Smoke Alarms

- In each sleeping room
- Outside each sleeping area
- On each story
- Building wiring system to provide primary power
- Battery backup
- Interconnection

Smoke Alarms in Existing Dwellings

- Retrofit smoke alarms when a permit is required:
  - Interior alterations or repairs
  - Additions
  - Battery-operated smoke alarms
- Exception – provisions do not apply for:
  - Minor work that does not require a permit
  - Exterior work such as roofing or siding
  - Replacing doors or windows
  - Addition of a deck or porch

Residential Fire Sprinkler Systems

- Required in:
  - New dwellings
  - New townhouses
- Design criteria:
  - IRC Section P2904
  - NFPA 13D
  - Both designs applicable to 1- and 2-family dwellings and townhouses

Exterior Walls

- Dwelling without fire sprinklers
- Dwelling with fire sprinklers
**Dwelling without fire sprinklers**

- **Eave Projections**
  - Projection
  - Lot line

- **No protection required**
- **1-HR protection**

**Dwelling with fire sprinklers**

- **Eave Projections**
  - Projection
  - Lot line

- **No protection required**
- **1-HR protection**

---

**Two-Family Dwelling Separation**

- 1-hour separation
- Continuous foundation to roof
- Exception
  - ½-inch gypsum board ceiling
  - ½-inch gypsum board on bearing walls
  - Draft stop in attic

**Townhouse Separation**

- 1-hour FR rated common wall
- Fire-resistant penetration requirements for electrical boxes

- No plumbing or mechanical
- 2-hour FR rated common wall

---

Copyright 2015 International Code Council
Parapet Exception

Dwelling Separation from Garage
- Not a fire-resistance-rated assembly
- ½" gypsum board on the garage side provides limited resistance to the spread of fire
- ¾" Type X gypsum board on ceiling when habitable space above

Dwelling Separation from Garage
- Penetrations not rated
- No openings from garage into a sleeping room
- Self-closing door
  - 1 ⅜"-thick solid-core wood
  - 1 ⅝"-thick solid-core steel
  - 1 ⅜"-thick honeycomb-core steel
  - 20-minute fire-resistance-rated

Fire Protection of Floors
- Underside of floor assembly
  - ½" gypsum board
  - ¾" wood structural panel
  - equivalent material
- Exceptions
  - ≥ 2 ×10 dimension or SCL
  - Sprinklers below
  - ≤ 80 ft² area
  - Crawl space with no storage or fuel-fired appliances
Light and Ventilation

- Habitable rooms:
  - Glazing ≥ 8% or lighting ≥ 6 footcandles
  - Openings ≥ 4% or mechanical ventilation

- Bathrooms:
  - Glazing ≥ 3 ft² or electric lighting
  - Openings ≥ 1.5 ft² or mechanical exhaust

Whole-house Mechanical Ventilation System

- Required if
  - Blower door test performed and
  - Air infiltration rate ≤ 5 ACH
- Prescriptive air flow rate based on
  - Area of dwelling
  - Number of bedrooms
  - Continuous or intermittent operation

Stairway Illumination

- Interior stairways
  - Treads and landings ≥ 1 foot-candle
  - Wall switch at each floor level ≥ 6 risers.

- Exterior stairways
  - Light source at top landing
  - Bottom landing providing access to a basement

Carbon Monoxide (CO) Alarms

- Required if
  - Fuel-fired appliance or
  - Attached garage communicating with dwelling unit
- Locations
  - Outside of each separate sleeping area adjacent bedrooms
  - Within bedroom with fuel-burning appliance located within bedroom or attached bathroom
- Power
  - House wiring with battery backup
Chimneys and Fireplaces

- Masonry fireplaces
- Masonry chimneys
- Factory-built fireplaces
- Factory-built chimneys
- Exterior Air Supply

Masonry Chimney Termination

- 3 feet above roof penetration
- 2 feet higher than any portion of a building within 10 feet
- Flashing to weatherproof the chimney penetration at the roof
- Crickets required for chimneys ≥30” wide
- Chimney cap required
- Rain cap optional

Energy Conservation

Part VII

Energy Efficiency

- IRC Chapter 11 is extracted from the applicable provisions of the 2015 IECC
Compliance Paths

Projects shall comply with one of the following:
1. Sections N1101.14 through N1104.
2. Section N1105 and the provisions of Sections N1101.14 through N1104 labeled “Mandatory.”
3. An energy rating index (ERI) approach in Section N1106.

Building Insulation

- Pieces of insulation >12” in width must have:
  - Visible R-value mark; or
  - Installer certification
    - Insulation type
    - Manufacturer
    - R-value

Blown-in or Sprayed Insulation

- Attic markers each 300 sq. ft.
- Certificate indicating:
  - Initial installed thickness
  - Settled thickness
  - Settled R-value
  - Installed density
  - Coverage area
  - Number of bags installed

Insulation Requirements

- Minimum R-values for insulation is based on climate zone
- Exceptions:
  - Energy truss or raised-heel roof truss
  - Reduced R-values in rafter or joist space
  - Cold-formed steel framing requires higher insulation R-values and continuous insulation sheathing to provide a thermal break
Insulation Requirements

- Slab on grade
- Crawl spaces
  - Insulation of the floor above the crawl space; or
  - Insulation of the exterior walls
    - When the crawl space is not ventilated to the outside
    - Vapor retarder on exposed earth of unventilated crawl spaces

Windows and Doors

- Fenestration includes:
  - Skylights
  - Roof windows
  - Vertical windows
  - Opaque doors
  - Glazed doors
  - Glass block
- U-factor
- Solar Heat Gain Coefficient (SHGC)

Sealing Against Air Leakage (Mandatory)

- Windows and doors
- Sill plate, rim joist, top plate
- Garage separation
- Tubs/showers
- Attic access opening
- Rim joists
- Recessed lighting
- Electrical boxes

Testing of Building Thermal Envelope (Mandatory)

- Blower door test required
- Allowable air-leakage rate:
  - Climate Zones 1 – 2: ≤ 5 ACH
  - Climate Zones 3 – 8: ≤ 3 ACH
- Test results on permanent certificate
Duct Insulation and Sealing

- Supply and return ducts in attics > R-8
- Supply and return ducts in other locations > R-6
- No insulation required for ducts within conditioned spaces
- Sealing of all ducts is required
- Air leakage test except when entire system is installed within the thermal envelope
- Building cavities cannot be used as ducts or plenums

Hot Water Pipe Insulation (Prescriptive)

- Hot water pipe insulation ≥ R-3 for:
  - ≥ ¾” diameter pipe
  - Water Heater to distribution manifold
  - Outside conditioned space
  - Under slab or underground
  - Piping in recirculation systems other than demand systems

Energy Certificate (Mandatory)

- Completed by:
  - Builder; or
  - Registered design professional
- Listing of
  - Insulation
  - Fenestration
  - Type and efficiency of equipment
  - Results of air testing
- Permanent certificate posted near furnace or approved indoor location

Building Utilities

Part VI
**Appliances Installation and Location**

- Gas-fired appliances
- Installation and clearances per the appliance listing
- Prohibited locations
  - Sleeping room
  - Bathroom
  - Toilet rooms
  - Storage closets
  - Space that opens only into such rooms or spaces
- Bedroom or Bathroom

**Exception**
- Other exceptions for:
  1. Direct-vent appliances
  2. Vented room heaters
  3. Vented wall furnaces
  4. Vented gas fireplaces

**Access to Appliances**

- Minimum 30” x 30” working space in front of the controls
- Access doors and passageways
  - Minimum 24” wide
  - Large enough to remove the largest appliance
- Clearance
  - Furnace compartments to be >12” inches wider than the appliance
  - Minimum 3” clearance at the sides and back
- Furnace
- Combination air directly from outdoors
- Non-direct-vent, gas-fired furnaces, boiler or water heater
- Space heating unit with weatherstripping
- No storage or other use
- Clothes or closet
- Bedroom or Bathroom
- Storage closet
- Space that opens only into such rooms or spaces

**Appliances Installation and Location**

- In garages, the ignition source ≥18” above the floor
  - Unless the appliance is listed as flammable-vapor-ignition resistant
- In all locations, protected from impact by vehicles

**Access Appliances in Attics**

- Finish access opening ≥ 20 x 30
  - (R807.1 Rough 22 x 30)
- Passageway
  - ≥ 22 x 30 h
  - ≥ 24-in. wide flooring
  - ≤ 20-ft. length
- Exception
  - ≤ 6-ft. high x 50 ft. long
- Furnace
- Equipment
- Stairwell
- Access opening
- Minimum 24-in. wide
- Length
- ≥ 20 ft.
- Light switch near access opening
- Access opening shall be at least 24 in. wide by 20 in. high
- Access opening shall be a minimum 24 in. wide by 20 in. high
Clothes Dryer Exhaust Systems

- **Termination**
  - Backdraft damper
  - No screen
  - ≥ 3 ft. from openings

- **Length**
  - Deductions for fittings
  - Label when > 35 ft.
  - Label ≤ 6 ft. from dryer
  - Listed transition duct

Dryer Exhaust Duct

- 4-in. smooth metal duct
  - Min. No. 28 gage
  - Insert in direction of flow
  - Max. 1/8-in. screw penetration

Whole-house Mechanical Ventilation system

- Prescriptive airflow rate based on:
  - Floor area of dwelling unit
  - Number of bedrooms
  - Continuous or intermittent

- System design
  - One or more supply or exhaust fans, or a combination
  - Outdoor air ducts connected to the return permitted to supply ventilation.

Combustion Air from Inside the Building

- Combustion air can draw from an adjacent room if:
  - Volume of adjacent space is >50 ft³ per 1000 Btu/h
  - At least 2 openings provide air from the adjacent room
  - Free area of openings based on:
    - Btu/h input rating of all appliances
    - 1 in² per 1000 Btu/h
    - Minimum 100 in² per opening

Combustion Air from Two Outdoor Openings

- Direct opening or vertical duct
  - Free area of >1 in² per 4000 Btu/h of total input rating
- Direct opening or horizontal ducts
  - Free area of >1 in² per 2000 Btu/h of total input rating

Combustion Air from Single Outdoor Opening

- Free area of the opening >1 in² per 3000 Btu/h
- Free area must equal the sum of the areas of all vent connectors in the space
- Minimum clearances required around the appliances for free circulation of air

Gas Vent Roof Termination

- Termination height for gas vents with a cross section <12" and at least 8' from a vertical wall is based on the roof slope
Gas Pipe Materials

- Schedule 40 steel
- Approved seamless metallic tubing
  - Gas used cannot be corrosive to the material
- Corrugated stainless steel tubing (CSST)
- Exterior underground locations only:
  - Approved plastic pipe, tubing and fittings

Prohibited Locations for Gas Piping

- Piping cannot be installed:
  - Within an air duct
  - Within a clothes chute
  - Within a chimney
  - Within a gas vent
  - Through any other townhouse unit
  - Entering a building below grade

Gas Piping Protection

- Concealed piping installed through holes or notches in studs, joists, rafters must be:
  - >1 1/2" from the nearest edge of the member or
  - Protected by No. 16 Gage nail shield plates
  - Except Schedule 40 black or galvanized steel gas piping
- CSST gas tubing requires protection in accordance with the code and the manufacturer’s installation instructions

Other Gas Piping Installation Requirements

- Above-ground gas piping outdoors
  - ≥ 3 1/2” above ground and above roof surface
  - Protection from corrosion for ferrous metal
    - Painting
    - Galvanizing
- Underground gas piping
  - Steel pipe wrapped with approved material for corrosion protection
  - Galvanizing is not approved protection from corrosion
  - Buried ≥ 12” deep
Gas Appliance Connections

- Appliance connector materials
- Appliance connector installation
  - Can pass through the appliance
    - Rigid metallic piping
    - CSST
    - Listed and labeled appliance connectors
    - Listed and labeled quick-disconnect appliance connectors
  - <6’, or
  - <50’ when connected to manifold

Plumbing Piping Protection from Damage

- Concealed piping installed through studs, joists or rafters
- < 1¼ in. from nearest edge
  - Shield plates ≥ 0.0575” thick steel (No. 16 Gage)
    - Covers area where the pipe passes through
    - Extends ≥ 2’ above sole plates and below top plates
- Exception for cast iron and galvanized steel pipe

Protection from Freezing

- Underground water service pipe
  - Buried ≥12” deep
  - Buried ≥ 6” below the frost line
- Building sewer pipe
  - Depth determined by the Jurisdiction
  - Stipulated in the adopting ordinance

Plumbing Piping Support

- Support
  - Maintains alignment and slope
  - Prevents sagging
  - Allows for expansion and contraction
- Underground
  - Continuous support
  - Suitable bedding materials
  - Not supported on rocks or blocks
  - Backfill free of debris, rocks, concrete, and frozen material
  - Protection of footings
# Aboveground Plumbing Piping Support

- Horizontal and vertical support spacing based on the pipe material
- A mid-story guide is required for vertical plastic piping ≥ 2-in. diameter

<table>

# Water Service

- When pipe for building sewer is listed for underground use within a building:
  - Water service pipe is permitted in the same trench with a building sewer (e.g. cast-iron or schedule 40 PVC DWV)
- For building sewer pipe not approved for underground use within a building:
  - Water service must be separated from sewer pipe:
    - ≥ 5’ of horizontal separation, or
    - Installed on a ledge ≥ 12” inches above and to one side of the highest point of the building sewer

# Water Supply System Design Criteria

- Water service at the building entrance
  - 40–80 psi
  - ≥ ¼” pipe size
- Distribution system pipe size based on
  - Fixture unit values
  - Developed length of piping
  - Water pressure
- Flow rates and consumption are limited for plumbing fixtures to conserve water
- Valves
  - Main shut-off valve
  - At each fixture other than showers and tubs

# Water Supply Protection

- Backflow prevention devices suitable for the application
  - Hose connections
  - Boilers
  - Heat exchangers
  - Lawn irrigation systems
- Air gap required at
  - Sinks
  - Lavatories
  - Bathtubs
Sanitary Drainage

- Approved fittings for change in direction

Cleanouts

- Cleanouts required where:
  - Horizontal drain lines change direction >45°
  - Within 10 ft. of building drain / building sewer connection
  - Where more than one change of direction occurs, only one cleanout is required in each 40'
  - A readily removable fixture, such as a water closet or a fixture trap of a sink, may serve as a cleanout

Fixture Vents

- The distance from the trap to the vent is limited
  - Self-siphoning fixtures such as water closets are not limited
  - Vent connection is not permitted to be below the trap weir

Vent Pipe

- Horizontal wet venting is permitted for fixtures of one or two bathroom groups located on the same floor
- Diameter of vent piping
  - At least ½ of the required diameter of the drain served
  - >1½
  - For vents >40’, increase of one pipe size
Vent Termination

- Open vents
  - ≥ 6 in. above roof
  - ≥ 6 in. above anticipated snow accumulation
- Frost closure
  - 97.5% outside design temperature ≤ 0°F
  - Increase to 3 in. at point ≥ 12 in. inside building envelope

Protection Against Scalding

- Temperature control devices are required on the water outlets of bathing fixtures and bidets to prevent scalding

<table>

Fixture Traps

- Traps provide a water seal with a depth of 2” to 4” to prevent sewer gases from entering the building
- Floor drains require a trap-primer or deep-seal design to prevent the loss of their water seal by evaporation

Water Heaters

- Connection to the water supply
- Drain pan if damage will occur
- Temperature & pressure relief valve
- Ignition sources elevated
  - >18” above garage floor
- Anchorage to walls
  - SDCs D0, D1, and D2
  - Townhouses in SDC C
Electrical Services

- IRC covers:
  - 120/240-volt
  - Single-phase systems
  - <400 amperes
- Main service disconnect
- Service distributes electricity to the premises wiring system
- Only one service is permitted for 1- and 2-family dwellings

Equipment Location

- Readily accessible service disconnect
- Working space
- Light source nearby
- Spaces above and below the panel are dedicated to the electrical installation
- Not in clothes closets or bathrooms
  - Electrical panels
  - Service disconnects
  - Circuit breakers

Electrical Service Size and Rating

- Service rating
  - Minimum 100 amp for single-family dwellings
  - Minimum 60 amperes for other installations
- Ampacity of ungrounded service conductors and service rating must at least match the load served in the structure

Grounding Electrode System

- Grounding options
  - Underground metal water pipe
  - Concrete-encased reinforcing bar (Ufer ground)
  - Approved ground rods

If a single ground rod has a resistance of >25 ohms, then a 2nd ground rod is required

Requires at least one additional electrode
### Bonding

- Main bonding jumper at service equipment
  - Connection of the grounding system to the grounded (neutral) conductors occurs at main service disconnect
- Metal water piping must be bonded to the ground system

### Conductor Sizing

- Ampacity tables are provided for all wire sizes based on the material and insulation type
- When sizing wires, several variables must be considered:
  - Temperature rating of the conductor insulation
  - Derating for bundled conductors
  - Temperature rating of the terminal

<table>
<thead>
<tr>
<th>Conductors</th>
<th>15 amp</th>
<th>20 amp</th>
<th>30 amp</th>

<td>15</td>
<td>10</td>
<td>30</td>
</tr>
<tr>
<td>Duplex or multiconductor receptacle rating (amps)</td>
<td>15 max</td>
<td>15 or 20</td>
<td>30</td>
</tr>
<tr>
<td>Single receptacle outlet minimum rating (amps)</td>
<td>15</td>
<td>10</td>
<td>20</td>
</tr>
</tbody>
</table>

### Overcurrent Protection Required

- Circuit breaker or fuse is required to protect all ungrounded branch circuit and feeder conductors
- Overcurrent protective device ratings cannot exceed the allowable ampacity of the conductor

### Wiring Methods

- Cable and conductors must be approved for the location
- Typically, above-ground wiring is Type NM non-metallic cable
- Protection from physical damage
- Fasteners
  - Approved fasteners
  - Spacing
- Cable support

<table>

</tbody>
</table>

Overcurrent devices located:
1. Where the branch circuit conductors receive their supply
2. At the service panel (typically)
3. So they are readily accessible
4. Where not subject to damage
5. Not in clothes closets or bathrooms
6. Not located above a step
Receptacle Outlet Locations

An outlet within 24” measured along wall. At least one outlet in each bathroom and laundry area. An outlet within 36” of each lavatory shall be required. Outlets shall have GFCI protection.

Bathroom requirements

General room requirements

Lighting Outlets

Wall switch–controlled lighting outlet
- Habitable rooms
- Bathrooms
- Hallways
- Storage areas
- Garages
- Stairways
- Outside each exterior door

Ground-fault Circuit-Interrupter Protection (GFCI)

GFCI protection required:
- Bathroom
- Kitchen counter
- Unfinished basement
  - Except fire/burglar alarm system
- Garage
- <6’ from sink
- Exterior
Arc-fault Circuit Interrupter Protection (AFCI)

- AFCI devices
  - Detect unwanted arcing in the wiring of the branch circuit
  - Open the circuit before excessive heat buildup can cause a fire
- AFCI devices are installed in the service panel or subpanel
- AFCI protection required for:
  - Living areas
  - Hallways
  - Closets

Receptacles

- Wet locations
  - Enclosure that is weatherproof
  - when a cord is plugged in
  - Receptacles prohibited within or directly over a bathtub or shower space
- Tamper-resistant receptacle required in locations accessible to children
  - Not required when:
    - >5½’ above the floor
    - Part of a luminaire or appliance
    - In a dedicated space for an appliance

Luminaires in Clothes Closets

- Type of luminaires
- Minimum clearances
- Clearances are measured from the fixture to the nearest point of the defined storage space

International Code Council is a Registered Provider with The American Institute of Architects Continuing Education Systems. Credit earned on completion of this program will be reported to CES Records for AIA members. Certificates of Completion for non-AIA members are available on request.

This program is registered with the AIA/CES for continuing professional education. As such, it does not include content that may be deemed or construed to be an approval or endorsement by the AIA of any material of construction or any method or manner of handling, using, distributing, or dealing in any material or product. Questions related to specific materials, methods, and services will be addressed at the conclusion of this presentation.
